Care Show Sees Latest Energy Efficient Laundry Equipment from Girbau UK

29 September 2009 Girbau UK, part of Girbau Group the world-leading manufacturer of commercial and industrial laundry equipment, will show its latest range of energy efficient washers and dryers on stand F13 at the Care Show, 3-4 November 2009, at the NEC Birmingham.

Girbau's most energy efficient washers ever, the latest 6 series comes in seven models with capacities ranging from 9kg to 122kg. Girbau 6 Series washers provide excellent washing while using less water, less energy and less detergent. The popular 9kg model (HS-6008) has already been named the most energy-efficient in its class by US body Energy Star. Tests carried out by Energy Star showed the HS-6008 washer uses far less water and electricity than the machines of other manufacturers.

"Energy efficiency, reduced carbon emissions and the controlled use of water are increasingly important factors and our latest 6 Series washers improve in all these areas," says Peter Marsh, managing director at Girbau UK. "When choosing new laundry equipment, look at the total cost of ownership as well as the initial purchase price. That's when you realise the benefits of class-leading economy and long-life reliability with lower running and maintenance costs."

The latest Girbau UK Pro Series II tumble dryers are designed to deliver energy efficiency, high productivity, quick drying and low maintenance with load capacities from 13.5kg up to 70kg. Easy to use, all Pro Series II dryers feature an advanced control unit with an auto dry feature which helps prevent overdrying. An extra large reversible door facilitates easy loading and unloading. For energy efficiency and cost-effective operation the four largest capacity dryers in

the range incorporate instant electronic ignition which reduces drying time and conserves energy.
