

## CASE STUDY

### **Cedars Hotel Upgrades Laundry with new Girbau Washers and Dryers**

**16 July 2009** – When old laundry equipment at the independent 25-room Cedars Hotel in Suffolk had become outdated, unreliable and was in need of replacement, the management turned to Girbau UK to re-equip the entire laundry with newer, more energy efficient machines. The hotel purchased two energy-efficient 9kg capacity Girbau HS6008 high speed washers and two Girbau 18lb gas dryers.

Situated in the heart of East Anglia on the edge of the market town of Stowmarket, the Cedars Hotel is a privately-owned, family-run 3 Star Hotel which takes pride in offering a warm welcome and a personal and high quality service to every visitor. That means it needs a reliable laundry capable of processing to the highest standards all of the hotel's bedding and towels on a daily basis.

“Girbau were able to put an excellent package together for us that included modern energy-saving machines and an attractively-priced maintenance contract, all in the same single finance package,” says Tony Carter, proprietor of the Cedars Hotel. “Knowing they offer 24-hour response and achieve 96% first time fix rates, we can relax confident in the knowledge that we won't be stuck with broken-down equipment. What's more, the new machines are definitely using less energy and producing a better finish than before.”

The Girbau HS-6008 washers now in daily use at the Cedars Hotel are the most energy-efficient in their class. Tests carried out by Energy Star showed the machine uses far less water and electricity than the same capacity machines of other manufacturers.
