Girbau UK Washers Now Available with Two New Energy and Water Saving Eco Programmes

25 September 2008 – As energy prices rise inexorably one commercial and industrial laundry equipment manufacturer, Girbau UK, has devised two new advanced energy saving Eco programmes to further improve the outstanding energy efficiency of its high speed washers.

Girbau UK, part of the world-leading Girbau Group, is offering the new Eco and Eco Express programmes on its most popular 9kg, 14kg and 19kg capacity high speed washers in the 6 Series range. The new programmes offer reduced cleaning time, lower energy consumption, reduced water consumption and increased productivity. The Eco programme has a wash cycle time of approximately 23 minutes while the Eco-Express programme is just 17 minutes. Both programmes also offer a detergent saving of around 20% over standard programmes.

“Energy bills represent a sizeable proportion of the running of any laundry, so as energy costs escalate, our customers are looking to replace older equipment with the latest energy efficient models,” said Peter Marsh, managing director of Girbau UK. “While our 6 Series high speed washers are already exceptionally energy efficient, we have now also developed these additional ultra-efficient wash programmes for lower cost washing of lightly soiled washing.”

Girbau’s 9 kg capacity HS-6008 washer has already been rated the most energy efficient washer in its class by US body Energy Star, even before Girbau UK developed these new high efficiency Eco programmes.
