

PRESS RELEASE

Girbau UK Launches Easy Load for Higher Laundry Productivity

07 September 2009 –Girbau UK’s Industrial Division has announced the addition of a new Easy Load option, which makes it even easier to load and unload its two largest high productivity washers: the HS-6057 (57kg) and HS-6110 (110kg) in its 6 Series range.

A further example of how Girbau is continually innovating in response to changing customer needs, the optional Easy Load function is cost effective and alternative to the company’s pneumatic TILT system. Easy Load performs two operations that help compact a load and increase capacity. It opens one of the machine’s two water inlets to moisten laundry, compacting it and eliminating air gaps. Then with the door open, the operator can rotate the drum slowly in both directions to help water to penetrate into the fabric.

Easy Load also makes it easier to unload the machine at the end of the cycle when washing is highly compacted round the inside. The system turns the washer to the left and right to shake the laundry free of the drum.

“The Easy Load option makes it even easier to maximise the efficiency of these big washers,” said Peter Marsh, managing director of Girbau UK. “Full loads make the most of the big machines’ capacity and minimise the use of energy, water and chemicals.”

For safety the Easy Load function requires operatives to perform two functions at the same time preventing the possibility of accidental activation. Girbau’s HS-6057 (57kg) and HS-6110 (110kg) models are now available in three configurations, the standard Stat model, the Stat model with the Easy Load option and the Tilt model which features a pneumatic tilting system.
