

PRESS RELEASE

Girbau UK Adds Intelligence to its Biggest Washers

11 August 2009 – Girbau UK, part of the Girbau Group, world-leading manufacturer of commercial and industrial laundry equipment, has extended the availability of its advanced Inteli programmable control system to include the three biggest washer extractors in its 6 Series range, the 44kg, 63kg and huge 122kg capacity models.

Previously only available on smaller models in the popular 6 series range, the Inteli control system offers 99 different programs, 20 of which are pre-programmed while the other 79 are modifiable phase-to-phase for exceptional versatility.

“Inteli control is the perfect tool for maximising energy efficiency and controlling the consumption of water and chemicals,” said Peter Marsh, managing director of Girbau UK. “Sophisticated and highly versatile, Inteli remains intuitive for the end-user. The breadth of programs now available on our 6 series washers means you can always use the optimal combination of cycles for high quality laundering, high productivity and minimised energy consumption, even on our highest capacity machines.”

Strong and durable, all washers in the 6 Series range offer spin speeds of up to 1,000rpm and have been designed to provide excellent washing performance with reduced cycle times. Girbau’s patented GDRIVE system uses microprocessor control to optimise the high speed spin cycle to suit different types of fabric as well as saving energy and water, reducing noise and vibration and prolonging machine life.

Girbau UK’s top-selling HS6008 9kg washer continues to be available with the LOGI controller offering eight modifiable programs. These can include the latest Eco and Eco Express programs for ultra-low energy consumption and effective washing of only lightly soiled laundry.
