### **Girbau UK Smartens Up with Intelligent New PC-120 Flatwork Ironer**

**09 December 2009** – The Industrial division of Girbau UK, part of the Girbau Group, world-leading manufacturer of commercial and industrial laundry equipment has launched the new PC-120 flatwork ironer. The energy efficient, high productivity ironer comes complete with Girbau's latest generation Inteli programmer designed to offer finely adjustable control and intuitive operation.

Built with one, two or three 1200mm diameter cylinders and a working width of between three and 3.5 metres, the Girbau PC-120 flatwork ironer is available in steam and hot oil-heated versions or with an integral gas-fired boiler. (Gas-fired versions are only available with one or two cylinders). High productivity of up to 45 metres per minute comes with no sacrifice to ironing quality as the ironer delivers consistent results day-in day-out.

"The new PC-120 ironer is a very large, but easy to use machine offering high productivity and greater energy efficiency," said Peter Marsh, managing director of Girbau UK. "It adds the versatility and ease of use of Inteli controls to the reliable, long operating life for which Girbau's rigid chest ironers have become renowned over the last 30 years."

The ironer's all-new Inteli electronic controls allow fine adjustment of speed, ironing temperate and pressure, with temperature adjustable to an accuracy of +/- 1°C. The control panel's graphical icons make it very simple and straightforward to use. Removable panels on the top and both sides of the machine make for easy maintenance too.
