

WET CLEANING: WHY? HOW?

Better cleaning quality on water-soluble stains providing hygienic garments.

New washable fabrics sensitive to processing with solvents.

- Reduction of solvent odours in dry cleaner's, softer and fresher fabrics with brighter colors.
- Washing processes with biodegradable laundry detergents.
- Reduction of investment costs increasing the value of your business.
- Increase of versatility in your business, presenting new processes.

The professional dry cleaner's experience in fibers and treatments, together with Girbau's **WET CLEANING** technology, will allow to carry out processes which are almost like hand washing. GIRBAU has at its disposal a wide range of machines equipped with all the requirements needed to develop such system.

After some years developing this kind of textile cleaning technique, and with the environmental legislation, nowadays it is impossible to create or to make improvements in a dry cleaner's without incorporating Wet Cleaning equipment.

GIRBAU machines are not only able to treat delicate linen with exquisite care, but also to process linen with a high soil level, requiring an energetic processes.

To incorporate equipment with such characteristics will generate value, by providing greater versatility of your dry cleaning business.

Multipurpose results in versatility and profitability

GLOBAL LAUNDRY SOLUTIONS

VERSATILITY TAKEN TO THE EXTREME

Girbau has been working on each of the parameters that have a bearing on the Wet Cleaning process, and has given its washing machines all the technology needed.

GIRBAU offers the range of HS-6013, HS-6017 & HS-6023 washing machines with 13 kg, 17 kg and 23 kg capacities. In the Wet Cleaning processes it is usual to work with 1:20 loading ratio. Therefore, we have at your disposal washing machines from 6,5 to 11,5 kg.

Equipped with "Inteli Control", an easy-to-use icon system, the 6 series washing machines are great auxiliaries in laundries for duvets and table linen.

The sign "Ready Wet Cleaning" tells us that the washing machine incorporates such performance and allows the users great versatility.

The inverter and the applications of the microprocessor allow us to achieve all variations, within each program as required, with the possibility to program through a PC (which is optional through the Inteli Manager Tool eXpert I.M.T.x.)

The dosing options integrated in the machine ensure a precise dosage in time (peristaltic pumps non-provided).

The ecologic cleaning process which takes care of both your fabrics as well as the environment
